FAQ – TRUEdraw™ Lancing Device

- Which lancets fit your lancing device?
  - TRUEplus lancets work perfectly with the TRUEdraw lancing device.
  - All universal lancets will work with TRUEdraw.

- How often should I change lancets?
  - You should change your lancet each time you test your blood glucose. Our lancets are designed for single-use only, and the more you use a lancet, the more it hurts. In addition, you can reduce the risk of infection by using a new lancet each time you test.

- I cannot remove the top to insert a lancet.
  - TRUEdraw has a pull top, not a twist top.

- Is there a warranty for the TRUEdraw lancing device?
  - No, the lancing device does not come with a warranty.

- Can I use my lancing device on my family members?
  - No, Lancing devices should never be shared and are intended for single patient use only.

- Where should I lance my finger?
  - Lancing your finger toward the sides of your fingertips, rather than in the middle helps reduce the pain of lancing. The sides of your fingertips have more blood vessels and not as many nerve endings. Given this, lancing on the sides usually does not hurt as much as it would in the middle of the fingertip.

- At what depth should I set the lancing device?
  - Lance your finger deep enough to get an adequate amount of blood without pressing too much. The depth may vary from finger to finger. The numbers on the lancing device will help indicate your depth setting: 5 being the deepest and 1 the lightest.
